Personal Statement

How do people learn to trust digital systems around them? This question drew Nebyat to explore how technology can be built responsibly and used for the common good. She believes technology is most powerful when guided by values like accountability and equity. For her, being part of the tech world means engaging fully with both its potential and its responsibility, and she's eager to help shape a future where progress truly serves everyone.

Education

AkiraChix

codeHive - Diploma In Information Technology

Feb 2025 - Present

Relevant Courses

- Data and Machine Learning
- Backend Development
- Frontend Web Development
- Mobile Development
- User Experience Research
- UI/UX Design
- Product Management
- Quality Assurance

Projects

Recos: AI-Powered Recruitment Platform

Developing Recos, an AI Agent designed to help recruiters find the right candidates by providing objective, data-driven insights that minimize skill mismatches and improve hiring accuracy.

Skills/Experience

Worked on a project aimed at helping recruiters find the right candidates by providing objective, data-driven insights that minimize skill mismatches and improve the hiring process, where I successfully:

- Analyzed recruitment workflows to pinpoint inefficiencies, optimizing processes for improved operational efficiency.
- Designed scalable PostgreSQL database schemas, ensuring GDPR-compliant data storage and efficient querying.
- Integrated external APIs (Odoo JSON-RPC, Google Calendar, Google Speech to Text, Gemini), resulting in seamless data synchronization, dynamic interview scheduling, and real-time transcription with low latency.
- Built internal APIs and integrated external APIs using the Django REST framework to support core application functionality.
- Utilized Google Gen AI SDK to generate tailored questions for an applicant and analyze response and generate comprehensive report from an interview.
- Developed a web interface in Next.js for recruiters syncing with their Odoo account showing candidate skill summary and AI performance report with hiring recommendations.
- Wrote, implemented, and documented test cases including unit, integration tests ensuring software quality and performance.
- Utilized Postman for effective API testing to ensure application reliability.
- Used GitHub for version control and team collaboration, maintaining clear documentation and issue tracking across development cycles.
