PERSONAL STATEMENT

Will the trade-off between privacy and convenience become the norm in our digitised future? Or will people reclaim control, heralding a new era for the internet? As public concerns about online privacy intensify and cultural movements like social media-free living gain momentum, Mercylin believes that privacy must be a universal right, not a privilege reserved for the few. As a software engineer, she hopes to contribute to privacy-first technologies that ensure privacy does not come with a price tag, accessible only to those who can afford it.

EXPERIENCES

Collaborated on a team case-studies, aimed at enhancing business efficiency by expanding market reach of Kenya's informal grocery vendors (Mama Mbogas), and helping recruiters find the right candidates.

- Conducted desk and primary research to analyse the problem and identify actionable solutions
- Created brand identity, including logos, wireframes and mockups using Figma and Adobe Illustrator.
- Built an informational website using HTML, CSS, and JavaScript.
- Designed a relational database schema using PostgreSQL to manage data.
- Designed a system architecture diagram to visualize data flow and component interaction within the system.
- Built APIs using Django REST framework to enable application functionality and tested the endpoints using Postman.
- Contributed to the development of an admin dashboard in React.js, streamlining application data management.
- Developed a mobile application using Kotlin, enabling real-time ordering, inventory tracking, and vendor discovery.
- Wrote and executed comprehensive unit, integration, system testing and E2E testing to ensure high performance.
- Developed an AI agent for Recruiters, focusing on minimizing skill mismatches and improving hiring accuracy.

PROJECTS

Recos

Recently built Recos, an AI Agent designed to help recruiters find the right candidates by providing objective, data-driven insights that minimize skill mismatches and improve hiring accuracy.
