

# PAULINE M. MUIRURI

SOFTWARE ENGINEER

## PERSONAL STATEMENT

As cyberwarfare emerges as a defining threat of the 21st century, Pauline sees more than just risk, she sees responsibility and opportunity. The growing vulnerability of digital systems necessitates new approaches to security, accountability, and resilience. For her, cybersecurity is not just about defense, it's about creating pathways for safer digital interactions and ensuring that individuals and institutions can operate with trust and confidence. The stakes are high and the pace is fast, but Pauline is ready to help shape a future that prioritizes both security and humanity.

## SKILLS/EXPERIENCE

Engaged in a team-based case study project focused on addressing machinery lending and tracking issues faced by Cooperatives in Rwanda.

- Conducted comprehensive desk and primary research to understand user challenges and identify potential solutions.
- Designed wireframes, logo, brand manual, and user flow using Figma and Adobe Illustrator.
- Designed a system architecture diagram that shows interaction between modules.
- Built an informational website using JavaScript, HTML, and CSS.
- Built an interactive dashboard with React for simplified task management and monitoring.
- Developed secure REST APIs using Django and integrated Daraja API for seamless payment transactions.
- Tested core features through unit and integration testing to ensure system reliability.
- Planned, assigned and tracked task progress using Jira.

## PROJECTS

### FeedLink

Currently developing FeedLink, a platform aimed at reducing food waste from reaching landfills and promoting a circular economy that benefits both communities and the environment.

## EDUCATION

### AkiraChix

codeHive - Diploma in  
Information Technology  
February 2025 - Present

## COURSES

Frontend Web Development  
Mobile Development  
Backend Development  
UX Research  
UI/UX Design  
Quality Assurance  
Data and Machine Learning  
Product Management
