Education

AkiraChix
Diploma In Information Technology
Feb 2025 - Present

Skills

Programming Languages

- Python, SQL
- JavaScript, TypeScript
- Kotlin

Libraries & Frameworks

- Django REST Framework
- React.js, Next.js, Tailwind CSS
- Retrofit, Jetpack Compose
- Pandas, NumPy

Tools & Platforms

- Odoo ERP (Integration via JSON-RPC)
- Google Cloud Platform (Gen AI SDK, Speech-to-Text, Calendar API)
- PostgreSQL, Postman (API Testing)
- Git & GitHub (Version Control & Collaboration),

Personal Statement

How do people learn to trust digital systems around them? This question drew Nebyat to explore how technology can be built responsibly and used for the common good. She believes technology is most powerful when guided by values like accountability and equity. For her, being part of the tech world means engaging fully with both its potential and its responsibility, and she's eager to help shape a future where progress truly serves everyone.

Experience

Developed AI-powered recruitment assistant designed to help recruiters identify the right candidates through data-driven insights and skill-mismatch reduction. Where I successfully,

- Designed and implemented secure recruiter onboarding and Odoo ERP integration using JSON-RPC, enabling seamless data exchange between systems.
- Applied AES encryption (ARS) for secure credential storage, ensuring compliance with data protection standards.
- Built role-based authentication and authorization, ensuring secure and tiered access control.
- Integrated Google Calendar API for automated candidate interview scheduling.
- Implemented real-time transcription with Google Speech-to-Text API to support performance evaluation and question generation.
- Leveraged Google Gen AI SDK to generate skill summaries and job summaries from candidate CVs and job descriptions, reducing recruiter screening time.
- Delivered a scalable backend API architecture with Django REST Framework, improving system maintainability and API response efficiency.
- Developed a recruiter dashboard using Next.js enabling efficient candidate and job posting management with integrated AI-driven insights, enhancing hiring decisions with faster, data-informed processes.
- Wrote, implemented, and documented test cases including unit, integration tests ensuring software quality and performance.

Projects

Recos

Developing Recos, an AI Agent designed to help recruiters find the right candidates by providing objective, data-driven insights that minimize skill mismatches and improve hiring accuracy.
